Parenting is a demanding task under any circumstances, and doing so when a child displays challenging behaviours increases the difficulty. These problem behaviour situations are often amplified as the child's challenges can collide with typical developmental changes all children experience. Parents can become at odds with the child, or even between themselves, when searching for the best responses to these tough situations. Other children in the home can also be impacted, as the problem circumstances become a common part of their day.

During this one-day workshop, participants will be provided with practical, flexible alternatives they can draw upon to teach new skills at home, help establish daily routines and effectively prevent or respond to challenging situations.
